Adding the code

```
1 //  
2 // ViewController.swift  
3 // HelloWorld  
4 //  
5 // Created by Steven Worrall on 11/6/17.  
6 // Copyright © 2017 USF. All rights reserved.  
7 //  
8  
9 import UIKit  
10  
11 class ViewController: UIViewController {  
12  
13     @IBOutlet weak var Label: UILabel!  
14     @IBOutlet weak var Text: UITextField!  
15  
16     @IBAction func Submit(_ sender: UIButton) {  
17         Label.text = "Hello, " + Text.text!  
18     }  
19  
20  
21     override func viewDidLoad() {  
22         super.viewDidLoad()  
23         // Do any additional setup after loading the view, typically from a  
24         nib.  
25     }  
26  
27     override func didReceiveMemoryWarning() {  
28         super.didReceiveMemoryWarning()  
29         // Dispose of any resources that can be recreated.  
30     }  
31  
32 }  
33  
34
```

```
class ViewController: UIViewController {  
  
    @IBOutlet weak var Label: UILabel!  
    @IBOutlet weak var Text: UITextField!  
  
    @IBAction func Submit(_ sender: UIButton) {  
        Label.text = "Hello, " + Text.text!  
    }  
}
```

Label.text refers to what is displayed by the label.

“Str...” + is just a regular string operation.

Text.text refers to the input by the user.

(!) force unwraps the optional* text in the text box. (More on this later)

@IBAction func Submit refers to the pressing down of the submit button

Let's run it (more on constraints later!)
